

PBDE CONTENT

Durst UV Inks

PBDE refers to polybrominated diphenyl ethers. PBDE are organobromine compounds that are used as flame retardants. DekadBE is a type of PBDE. Like other brominated flame retardands, PBDEs have been used in a wide array of products, including building materials, electronics, furnishings, plastics, polyurethane foams and textiles.

Durst confirms that these materials are not contained in Durst Rho, P5 and WT inks.

We stay at your disposal for any further questions.

Best regards,

A handwritten signature in blue ink, appearing to read "S. Kappaun", written over a horizontal line.

Dr. Stefan Kappaun, MBA
